Summary

Data Analyst / Analytics Engineer with 3+ year experiences building end-to-end data pipelines, working with API integrations and cloud data platforms, ERP system automation, and analytics solutions that drive revenue growth, cost optimization, and operational efficiency. Proven track record of reducing manual processes by 90%, optimizing logistics costs by 10–15%, and enabling executive-level decision-making through real-time data systems.

Education

University of California, San Diego

Bachelor of Science in Joint Major Mathematics and Economics

March 2023

San Diego, CA

Coursework: Microeconomics, Macroeconomics, Econometrics, Mathematical Reasoning, Introduction to Analysis, Numerical

Analysis: Linear Algebra, Modern Algebra.

San Diego Miramar College

Associate of Science in Business Administration Finance

June 2020

San Diego, CA

- Coursework: Financial Accounting, Business Law, Business Communication, Statistic, Principle of Information System.

Experience

Tomahawk-Power | Operations & Analytics Associate II

September 2023 – Present

- Built an end-to-end ETL data pipeline (Python, NetSuite API, Google BigQuery, Power BI) reducing reliance on third-party tools and saving \$5,000 annually
- Developed automated KPI dashboards in Power BI using SQL-based data models, reducing manual reporting by 90%
- Designed and implemented NetSuite workflows and system automations, reducing process time from ~2 minutes to <30 seconds and minimizing manual data entry and errors
- Integrated NetSuite with external systems (ShipStation, 3PL services) to enable automated data synchronization and scalable operations
- Led pricing analytics and strategy across major channels (Home Depot, Lowe's, Amazon), supporting R&D product launches while maintaining 25%+ profit margins and adapting to tariff-driven cost changes
- Built a 3PL inventory optimization model across 3 different warehouses and top 20 best selling SKUs using demand and carrier performance data, reducing shipping distance, improving delivery speed to 2-day targets, and maintaining 90%+ Amazon Prime on-time delivery
- Implemented carrier benchmarking and competitive rate strategy, reducing shipping costs by 10–15%
- Conducted returns and product performance analysis, identifying high-return SKUs (>8%) and root causes; partnered with vendors to improve quality and policies, reducing return rate by 2% YoY
- Served as NetSuite administrator and systems advisor, ensuring data integrity, troubleshooting issues, and driving continuous process improvements

Project

*End-to-End Data Pipeline & Analytics Platform | Python, SQL, Power BI, Claude

- Built an end-to-end analytics engineering pipeline using Python (with Claude AI) and API integration with NetSuite to extract and prepare 100K+ records for analytics use cases.
- Developed a star schema data model (1 fact, 10-dimension tables) in Google BigQuery and Power BI, enabling structured data transformation, modeling, and analytics layer optimization
- Delivered production-ready BI dashboards and KPI layers in Power BI, enabling self-service analytics, executive reporting, and data-driven decision-making, reducing manual reporting by 90% and driving business growth (+5% YoY, +3% forecast beat)

Technical Skillset

- Languages: SQL, Python
- Data & BI: Power BI, Tableau, Excel, KPI Dashboards
- Data Engineering: ETL Pipelines, API Integration, Data Modeling (Star Schema), Data Warehousing
- Cloud & Tools: Google BigQuery, NetSuite ERP, ShipStation, 3PL Systems
- Analytics: Statistical Analysis, Forecasting, Pricing Analytics, A/B Thinking
